Nationality : Pakistan

As a data scientist with over a year of experience, I bring a special blend of knowledge, training, and experience that may benefit any company. I can assist businesses in making data-driven decisions that promote growth and profitability because to my solid background in statistical analysis, data visualisation, and communication. My proficiency with tools like Excel, SQL, Python, and other data analysis applications helps me to quickly and precisely extract insights from big datasets. I am a tremendous asset to any firm because of my background working with cross-functional teams and converting complex data into clear insights. Overall, I am able to offer distinctive insights that contribute to business value and success thanks to my talents, background, and experience.

Remote

- **Collecting and Cleaning data** :Data analysts are in charge of acquiring and arranging data from a variety of sources, including databases, surveys, and client feedback. They must make sure the data is true, complete, and current.
- **Data analysis**: Data analysts use statistical techniques and data analysis tools to identify trends and insights from the data once it has been gathered and structured. To help stakeholders understand their findings, they can generate visualisations, perform data mining, and establish data models.
- **Reporting and presenting data**: Data analysts must communicate their findings in a way that is easy to grasp for others. To share their insights with management and other stakeholders, they could provide reports, dashboards, and presentations. On the basis of their findings, they may also make suggestions to
